EDUCATION

Bowen University | Osun, Nigeria
Bachelor of Science in Computer Science
- Courses: Programming in Java, R, and C#, Machine Learning with Python, Mobile Application Development, Human-Computer Interface, Computational Science and Numerical Methods, Algorithms and Complexity Analysis, and Net-Centric Computing.
- President, Graphics Design Club
- Vice President, Product Design club

PROFESSIONAL EXPERIENCE

Freelance | Lagos, Nigeria 2026- Present
Software Engineer
- Engineered a registration and accreditation platform using Gin-Gonic and Supabase, supporting five attendee categories with Paystack payments confirmed by idempotent webhooks, so passes were issued only after verified payment.
- Developed a comprehensive ePortal system for God's Vision School, streamlining administrative workflows such as tuition fee processing, grade uploads, and student result verification.
- Engineered a bulk account creation service that ingests Excel spreadsheets, adapting system workflows to match existing client habits and significantly reducing on-boarding friction.

Semicolon Africa | Lagos, Nigeria 2025 – 2026
Software Engineer
- Developed high-performance RESTful APIs using Spring Boot. Improving response times through Redis caching.
- Designed and implemented microservices architectures, improving system scalability and deployment efficiency.
- Streamlined application deployment using Docker, reducing deployment time by 90%.
- Fixed critical production bugs within 24 hours using root-cause analysis and unit testing.
- Integrated Paystack payment gateway for secure card verification and payment processing, enabling seamless online transactions and real-time payment confirmation.
- Utilized React libraries (e.g., Tailwind-CSS, React Router, Redux) to create intuitive and performant interfaces, improving usability and delivering a smooth, responsive user experience across devices

CrownCrystal Technologies Ltd | Lagos, Nigeria 2023 - 2024
IT Support Specialist
- Assisted the configuration of a variety of devices for organizations including AlphaBeta Consulting, FBNQuest Merchant Bank.
- Assisted in the troubleshooting and configurations of a significant number of HPE servers for Jubilee Life Mortgage Bank.
- Supported the managerial team in acquiring and strengthening several partnerships with international and local organizations including and not limited to SolarWinds, Kobra, Evolis, Hikvision West Africa Limited, and Huawei.
- Assisted in the management and maintenance of the company website including Data Entry, SEO Optimizations, Debugging.

Semicolon Africa | Lagos, Nigeria 2021 - 2021
Software Engineering Intern
- Architected a complete refactor of the backend service to follow a Clean Architecture pattern, decoupling business logic from external dependencies.
- Co-developed a user-centric landing page in collaboration with the UI/UX team, focusing on modern frontend best practices.
- Assisted in creating and maintaining SQL databases for efficient data storage and retrieval.
- Assisted in the design stage by designing complex Entity-Relationship Diagrams, defining one-to-many and many-to-many relationships to ensure data integrity across the system.

PROJECTS

MedCheck | Java (Springboot) / Dart (Flutter) / React + Vite / **PostgreSQL**

- Engineered an end-to-end traceability system to combat drug counterfeiting, utilizing unique serialization to track pharmaceutical provenance from the manufacturing plant to the end consumer.
- Designed a comprehensive reporting system to identify and flag counterfeit drug handlers across the entire pharmaceutical supply chain.
- Designed and deployed a consumer-centric Flutter application to maximize convenience, complemented by a comprehensive web interface serving all tiers of the supply chain.
- Engineered a secure, stateless REST API by integrating JSON Web Tokens (JWT) for user authentication, ensuring cryptographic verification without relying on server-side sessions.
- Designed a custom authentication architecture, utilizing advanced security filters to fully govern data access and protect sensitive supply chain operations.

CampusPlacement | Python (FastAPI) / StreamLit

- Processed and sanitized a large-scale dataset of 100,000 entries, performing rigorous feature engineering across 24 variables.
- Architected an end-to-end Scikit-Learn preprocessing pipeline for a 100,000-entry dataset, integrating stratified sampling for balanced target distribution with dynamic feature transformation (ordinal/one-hot encoding and standard scaling) to process mixed data types.
- Built an automated evaluation pipeline to train, test, and benchmark 8 machine learning models, optimizing for high-recall predictions.
- Engineered a production-ready machine learning pipeline, serializing a Support Vector Classifier (SVC) and its feature preprocessors to enable real-time student placement predictions and deployed on Render.
- Built and deployed an interactive web dashboard using Streamlit to expose the machine learning classification model to end-users.

KutIt | Java (Springboot) / React + Vite / MySQL

- Architected a collision-resistant URL shortening service by engineering a high-entropy algorithm in Java that utilizes a base-62 alphanumeric character set to generate over 3.5 trillion unique, 7-character identifiers.
- Engineered a tiered access model for a URL shortener, offering guest users instant shortening while providing authenticated accounts with advanced link tracking.
- Architected a centralized Global Exception Handling layer using the RESTControllerAdvice annotation, decoupling error-handling logic from business services and reducing code duplication across the entire backend.
- Designed and deployed a stateful authentication system, utilizing server-side session management via HttpSession to provide a robust and secure user experience.

Email Service | Golang

- Engineered a high-performance email service in Go using gRPC and Protocol Buffers (Protobuf) for efficient inter-service communication, incorporating buf/protovalidate for robust, request-level schema validation.
- Architected a robust data layer using GORM with a PostgreSQL backend, implementing a Repository pattern to manage dynamic email templates and maintain detailed audit logs for all outgoing communications.
- Enhanced system reliability by implementing custom gRPC unary interceptors for request logging and performance monitoring

ADDITIONAL INFORMATION

Technical Skills: Java, Golang, Python, JavaScript, HTML, CSS, SQL, No-SQL, Git.
Technologies: GitHub, Linux, Gin, Nestjs, gRPC, RestAPI, React.js, Spring Boot, Django, Test Driven Development, PostgreSQL, MySQL, MongoDB, Postman API, Spring JPA, SOLID Principles, Clean Code, N-tier Architecture, Monolith Architecture, Flask, FastAPI, Spring Security, Session-based Authentication, JWT Authentication, Nginx, Mockito, API integration, Cloudinary, Integration Testing, Design Pattern, System Design and Unit Testing.
Interests: Data Structure, Leetcode, Backend Development, Open Source Contribution, Cloud Engineering, and System Architecture.
Soft Skills: Learning and Development, Problem-Solving, Industrial Thinking, Design Thinking, Critical Thinking, Leadership, Troubleshooting, Teamwork.
